Software Engineer (Frontend / Product-Focused)

Frontend-leaning full-stack engineer focused on building **high-quality, performant user interfaces** backed by reliable systems. Experienced in TypeScript, React, and API-driven architectures, with a strong emphasis on translating complex workflows into intuitive, scalable products.

I build systems end-to-end—from data modeling and APIs to polished UI—owning problems from concept to delivery. My work focuses on clarity, performance, and usability, with a track record of rapidly iterating based on real user feedback.

Technical Skills

Frontend Engineering
React, TypeScript, Vite, component-driven architecture, SPA design, state management, responsive UI, performance optimization

Backend & APIs
Node.js, Express, REST APIs, service-layer architecture, JWT authentication

Data & Systems
SQL (SQLite), Prisma ORM, relational modeling, structured state systems

Tools & Workflow
Git, GitHub, ESLint, VS Code, AI-assisted development workflows

Additional Exposure
Python, Redis concepts, Docker concepts, CI/CD fundamentals

Engineering Projects

SightLine — Interactive Music Literacy Platform

Live: sight-line-topaz.vercel.app
GitHub: github.com/cjohanson64-netizen/SightLine

- Built a **real-time interactive web app** translating complex domain data into intuitive user workflows
- Designed and implemented **modular frontend systems in React + TypeScript** for responsive, state-driven UI
- Developed a structured data pipeline to transform domain inputs into **predictable, user-facing outputs**
- Iterated directly with users to refine UX, improving clarity, usability, and system reliability
- Focused on performance, responsiveness, and clean UI behavior across dynamic user interactions

---

Predictive Pantry — Inventory & Decision Workflow App

GitHub: github.com/cjohanson64-netizen/PredictivePantry

- Developed a **React + TypeScript application** focused on filtering, tracking, and decision-making workflows
- Designed reusable UI components to support **scalable product evolution and rapid iteration**
- Implemented structured state management to ensure **predictable UI behavior and data consistency**
- Improved performance and usability through iterative debugging and refinement
- Translated complex system logic into clear, actionable user interfaces

---

LMS Software Demo — Full-Stack Learning Platform

GitHub: github.com/cjohanson64-netizen/lms-software-demo

- Built a full-stack platform modeling **real-world workflows (enrollment, permissions, reporting)**
- Developed RESTful APIs using Node.js, Express, and Prisma with a focus on **clarity and maintainability**
- Implemented role-based access control (RBAC) and secure authentication flows
- Structured backend systems using service and controller layers to support long-term scalability
- Connected frontend and backend systems to deliver **cohesive, end-to-end user experiences**

Experience

Curriculum & Learning Systems Designer

Independent / Project-Based — Saratoga Springs, UT
2021–Present

- Designed and built **user-facing tools and systems** that translate complex processes into intuitive workflows
- Rapidly iterated on products using feedback, improving usability, clarity, and performance
- Owned projects end-to-end, from concept and system design to implementation and refinement
- Collaborated across technical and non-technical stakeholders to deliver effective solutions

---

Music Educator (Choir Director)

Alpine School District — Utah
2015–Present

- Designed and executed systems requiring **precision, timing, and real-time feedback loops**
- Managed complex, high-stakes environments requiring **clarity, adaptability, and consistent outcomes**
- Built repeatable processes to improve performance reliability across large groups
- Developed strong communication and leadership skills in fast-paced, dynamic settings

---

Education

Master’s Degree — Music Education
Bachelor’s Degree — Music Education
